

BARKADA LEAGUE

Design System Responsive UI Documentation

Visual coursework submission based on the finished React application.

CORE IMPLEMENTATION

Plain CSS + :root tokens

Dark competitive UI

Primary breakpoint: 640px

375px READY

ACCESSIBLE

FOUNDATIONS

Colour, type, spacing

COMPONENTS

Reusable UI patterns

RESPONSIVE

Desktop + mobile

STATES

Focus, errors, delete

Prepared from the final Barkada League interface screenshots.

Foundations

The fixed visual decisions that keep every Barkada League screen consistent.

STYLING APPROACH

Plain CSS

Tokens live in :root custom properties.
Shared classes consume those tokens across the React UI.

[NO UI LIBRARY](#)[DARK THEME](#)

CORE COLOUR TOKENS

--color-primary

#00BFFF

Links, buttons, active states

--color-primary-bright

#20D4FF

Highlights / focus

--color-bg

#080B10

Page background

--color-surface

Match actions

The same tokens and component patterns are reused across routes rather than restyled per screen.

Reusable component inventory

Atomic-design levels, where each component appears, and its real React inputs.

COMPONENT	LEVEL	APPEARS ON	PROPS / INPUTS
Button	Atom	Forms, history, CTAs	variant, type, disabled, className, children
Input	Atom	Record / Edit forms	id, invalid, className, native input props
Select	Atom	Leaderboard, profile, forms	id, invalid, className, children
Badge	Atom	Leaderboard, profile, history	variant, className, children
TrophyIcon	Atom	Header, #1 leaderboard	size, className
FormField	Molecule	Record / Edit forms	label, htmlFor, error, children
StatCard	Molecule	Player profile	value, label
MatchCard	Molecule	Dashboard, history, profile	match, showActions, perspectivePlayerId, highlight, delete callbacks
LeaderboardRow	Molecule	Leaderboard table	entry, highlight
Header	Organism	All routes	internal menu state; no external props
LeaderboardTable	Organism	Leaderboard	standings, highlightPlayerIds
MatchForm	Organism	Record / Edit Match	players, seasons, initialValues, onSubmit, submitLabel, submitting, submitError
RecentMatches	Organism	Leaderboard / profile lists	matches, emptyMessage

Leaderboard - responsive layout

Desktop table becomes compact player cards below the 640px breakpoint.

Winner name uses cyan emphasis, not success green

The UI does not rely on colour alone: destructive states include explicit Delete labels and confirmation copy.

Responsive plan & accessibility

The final implementation follows the course requirement for a usable 375px-wide phone layout.

RESPONSIVE PLAN

Below 640px

- Header navigation collapses to a menu button.
- Leaderboard table becomes stacked player cards.
- Match/history rows reflow vertically.
- MatchForm fields stack into one column.
- Player stat cards become a 2 x 2 grid.
- No page-level horizontal scrolling at 375px.

640px and above

Full navigation, table layout, horizontal match rows, opposing form columns, and one-row profile stats.

ACCESSIBILITY CHECK

- ✔ **Contrast** Core text/background pairs exceed 4.5:1.
- ✔ **Semantics** Real header, nav, main, form, table and button elements.
- ✔ **Labels** Every form control is paired through label/htmlFor + id.
- ✔ **Keyboard** Visible :focus-visible treatment for links and controls.
- ✔ **Decorative icon** Trophylcon is hidden from assistive tech with aria-hidden.
- ✔ **Motion** prefers-reduced-motion removes continuous motion and transitions.

DESIGN REFERENCE

Barkada League uses a deliberately small system: five core colour roles, three type roles, a compact spacing scale, and reusable React components.

The screenshots in this document show those decisions applied consistently across leaderboard, history, record/edit forms, player profiles, navigation, focus states, errors, and destructive actions.

This visual PDF is the design-system submission; the source application remains the reference implementation.
